

Amir Mohamad Aghajani

Coaching & Mentoring web Development

Software Engineer

About:

Hi, I have been working in web programming for about three years. Currently, I live in Iran, where I serve as a training manager and web developer at my company. I obtained my bachelor's degree from QIAU University. Before transitioning to programming, I worked in content creation and had a strong interest in automotive mechanics. These experiences helped me develop my analytical and problem-solving skills, which are crucial in my role as a developer. My technical skills include proficiency in multiple programming languages, frameworks, and tools that enhance my development capabilities. In addition to software development, I enjoy sharing knowledge with others and assisting new programmers during training sessions. My soft skills—such as creative thinking, problem-solving, teamwork, leadership, and ideation—enable me to communicate and collaborate effectively with my team. As an introverted individual, I thrive in collaborative environments and enjoy finding creative solutions while contributing to a positive and supportive atmosphere. Overall, my combination of technical expertise and interpersonal skills allows me to excel in both development and training roles

Projects:

Karjoo+ Landing

HTML5 CSS JavaScript Tailwind

Karjoo.plus is a comprehensive platform for human resource management, featuring an exhibition calendar, a list of job fairs, and detailed pages for each exhibition. Built with Astro .and Tailwind CSS, it offers a seamless user experience and responsive design
